- All warning pyramids are equipped with a standardised adapter and foldable carrying handle. Warning lights, among other things, can be easily mounted on top of them.
- The luminous yellow colour also ensures greater conspicuity during the day
- Ideal for use at night

Description

Please note the article numbers and technical data when ordering. The NESTLE warning pyramids are ideally suited for securing emergency scenes, at construction sites, during surveying work or as an indication of dangerous situations. Thanks to anodised aluminium and PVC plastic fabric, the warning pyramid defies all weather conditions. The warning pyramids are available in 70 cm or 90 cm side lengths. Also available as a light version with a central foot, or as a heavy version with a spring mechanism without a central foot. The spring mechanism makes it easy and quick to erect and dismantle. Furthermore, there are four different covers for the warning pyramids: white daylight, white retro-reflective, yellow and yellow retro-reflective. The reflective covers are ideal for night use and increase your safety. You can choose between the danger symbol "Caution" (VZ101), "Shovel man" (VZ123) and "No smoking" (NZ01). In addition, there are over 200 individual inscriptions to choose from that specifically indicate the type of danger.
