

NESTLE mini prism pole with 5/8" connection thread

Flexible in use - universally applicable!

Product number :14000000

Topfeatures

- Also very well suited for cutting into stringers.

All special features at a glance

- Mini prism rods for surveying of all kinds in the building sector and cadastre.
- With these mini prism poles you can align your reflector very close above the ground point. The error that arises with a slightly misaligned circular bubble thus has a considerably weaker effect than with a normal-length prism pole.
- Solid all-metal construction with adjustable circular bubble.
- With 5/8 tip made of indestructible carbide.

Description

Use the NESTLE mini prism pole for staking out and recording work close to the ground, for precision measurements or inaccessible points. The NESTLE mini prism poles are the benchmark in terms of durability and precision and are perfect for surveying of all kinds in the construction and cadastral sectors. Can be used for all common prism systems with 5/8" thread.
