

NESTLE measuring wheel, standard model, spoked wheel with hand brake

Simple distance measurements over long distances

Product number :12010001

Topfeatures

- Precise and at the same time easy to handle.
- Due to the high quality production, our measuring wheels often provide decades of service in tough daily use.
- As a quality certificate, you will receive a test sticker on each measuring wheel that indicates the tolerance of the wheel. This is only available with measuring wheels from Gottlieb NESTLE!

All special features at a glance

- Measuring wheel for road and track construction
- Quality counter MADE IN GERMANY mounted above the measuring wheel and thus easy to read from a standing position.
- Counter also counts backwards, subtractions are possible.
- Zero setting lever directly next to the counter enables quick resetting of the counter.
- Stable and generous storage bar is simply folded out to the rear.
- Frame made entirely of metal and robot-welded, additionally powder-coated in orange Bauwarn colour.
- Sturdy spoke wheel made of die-cast aluminium keeps the measuring wheel securely on track and ensures maximum running smoothness.
- The rubber is ground to an exact diameter of 318.5 mm. The frames of our measuring wheels are robot-welded and thus guarantee consistent quality and extreme robustness for years to come.
- The brake on this model has been converted into a handbrake and is connected to a lever on the handle. This must be pulled to release the measuring wheel. This enables even more precise measurements.

Description

Measuring wheels are used for measuring distances on level ground. The wheel is rolled along the measuring distance while being held forward by a guide rod. The distance travelled is displayed by means of a counter. Typical applications are: official use, road and track construction, agriculture and forestry, landscaping and everywhere where distance measurements over medium to long distances are required. Choose measuring wheels with hand brake for even more ergonomic operation. The quality counter records distances in the direction of travel and subtracts against the direction of travel. This measuring wheel is equipped with a parking bracket, integrated brake as well as a foldable guide rod. NESTLE measuring wheels are always "Made in Germany".

Technical Details

Calibratability	no
Colour	Construction warning colour orange
Weight	3400 g
Wheel	Spoked wheel
Wheel diameter	318.5 mm

Measuring range	9999.99 m / cm reading
Wheel circumference	1 m
Tolerance	< 0,05 %

Scope of supply

NESTLE measuring wheel, spoke wheel version
