

NESTLE Forestry caliper Waldfix 50 cm

Durable and robust - from the leading European manufacturer

Product number :20202000

Topfeatures

- The clip can be worn comfortably on the belt.
- The technical features guarantee comfortable handling even under difficult conditions.
- The measuring clamp is extremely robust and resistant for many years of hard use.

All special features at a glance

- For determining tree diameters.
- The Waldfix 50 measuring clamp has a 20 x 5 mm flat profile and thus a weight of only 400 600 g.
- The caliper of the measuring clamp slides over the measuring rail without jamming and displays exact measuring results.
- The anodised layer prevents abrasion of the numbers and makes the measuring clamp insensitive to wind and weather.
- The deep black numerals under the titanium-coloured anodised coating are easy to read even in twilight.
- The special alloy gives the flat profile optimum bending strength.
- Push handle made of impact-resistant polyamide.

Description

All our experience as a leading European manufacturer of forestry measuring equipment has gone into the development of the Waldfix measuring clamp. It is suitable for determining the log diameter of lying or standing timber. The flat profile of 20 x 5 mm allows a total weight of only 400-600 g. The special laser-engraved printing process makes the numbers easy to read even at dusk and an anodised layer reliably prevents abrasion. At the same time, this ensures easy cleaning of resins and dirt. The special alloy makes the dial extremely rigid, robust and resistant. Available as standard and "calibrated" version in three lengths.

Technical Details

Weight	500 g
Length	50 cm
Measuring rail	20 x 5 mm, flat profile
Conformity assessed	no

Scope of supply

Forestry caliper
