

NESTLE Forestry caliper Waldmeister 40 cm

Woodruff good

Product number :20001001

Topfeatures

- The shape of the clip makes it easier to read even when the wood is standing.
- The technical features give the clap comfortable handling even under difficult conditions.
- The measuring clamp is extremely robust and resistant - for many years of hard use.

All special features at a glance

- For determining tree diameters.
- The caliper of the measuring clamp slides over the measuring rail without jamming, but shows exact measuring results.
- The anodised layer prevents abrasion of the numbers and makes the measuring clamp insensitive to wind and weather.
- The deep black numerals under the titanium-coloured anodised coating are easy to read even in twilight.
- The special alloy guarantees a high bending strength of the oval profile.
- Push handle made of impact-resistant polyamide, measuring leg welded of aluminium.

Description

The Waldmeister forestry caliper is the classic among the measuring clamps for determining trunk diameters. Thanks to the practical and robust design with oval profile, the caliper slides over the measuring rail without jamming. The special printing process of the scale makes the numbers easy to read even in twilight and an anodised coating reliably prevents abrasion. At the same time, this ensures easy cleaning of resins and dirt. The special alloy makes the dial extremely rigid, robust and resistant. Available as standard and "calibrated" version in four lengths. Different graduation patterns are also available on request.

Technical Details

Weight	800 g
Length	40 cm
Measuring rail	30 x 15 mm, oval profile
Conformity assessed	no

Scope of supply

Forestry caliper
