

NESTLE steel alignment rod, round tube tip, length 2 m, r/w w/r 12 pieces in a set

Practical set of 12 with colour gradient: 6 pieces red/white, 6 pieces white/red

Product number :11100000

Topfeatures

- All ranging poles are "Made in Germany"
- Steel ranging pole - not demountable
- mixed 6x r/w, 6x w/r

All special features at a glance

- Use of best steel (Ø 27mm) in production
- Sturdy steel tip
- Robust and durable due to the PVC sheathing

Description

Ranging poles are used to mark and signal terrain or boundary points during construction and surveying work. In addition, ranging poles help to align or align in the straight line between two poles with a third ranging pole. The two-colour paint makes the alignment rods easily recognisable even from a distance. The colour fields are 50 cm long. In order to make it easier to escape, ranging poles are often placed in rows with alternating heads. Sturdy steel tips are used for robust work on hard ground. Only the best steel (Ø 27 mm) is used for this alignment rod. NESTLE steel alignment rods are PVC-coated for a long service life. Quality Made in Germany.

Technical Details
