

NESTLE wooden tripod, heavy duty version, 93-168cm

For highest accuracy requirements

Product number :13702000

Topfeatures

- High-precision measurements with theodolites, total stations and robotics stations.
- No water can penetrate due to special wood treatment
- Very good damping properties

All special features at a glance

- Our heavy wooden tripods are made of the highest quality wood.
- A special oil treatment prevents the penetration of water and the resulting swelling of the wood.
- Wooden tripods have better damping properties than aluminium tripods, so vibrations can be absorbed very well.
- In addition, the material expands less in direct sunlight.
- The handling of the wooden tripods is just as convenient as with the aluminium tripods.

Description

Wooden tripods have high damping properties and behave almost neutrally in sunlight. This makes wooden tripods suitable for stationing surveying instruments (theodolites, total stations, motorised robotic stations) for measurement with high and highest accuracy requirements. A special oil treatment prevents the penetration of water and the resulting swelling of the wood. This tripod is equipped with a triangular head plate.

Technical Details

Connection	5/8 "
Working range at 1m tip distance	90 to 170 cm
Weight	6200 g
Clamping	Clamping screws
Head	Flat, metal
Transport length	108 cm

Scope of supply

Wooden tripod
