

NESTLE steel alignment rod, round tube tip, length 2 m, r/w, 12 pieces in a set

Practical set of 12 with red/white colour gradient

Product number :11101000

Topfeatures

- Robust and durable due to PVC coating
- All ranging poles are MADE IN GERMANY.
- Steel ranging pole cannot be dismantled

All special features at a glance

- Use of best steel (Ø 27 mm) in production.
- Sturdy steel tip

Description

Ranging poles are used for marking and signalling terrain or boundary points during construction and surveying work. In addition, ranging poles are used for escape and evacuation, where a third ranging pole is inserted in the straight line between two poles. The two-colour paint makes the alignment rods easily recognisable even from a distance. The colour fields are 50 cm long. In order to make it easier to escape, ranging poles are often placed in rows with alternating heads. Sturdy steel tips are used for robust work on hard ground. Only the best steel (Ø 27 mm) is used for this alignment rod. NESTLE steel alignment rods are PVC-coated for a long service life. Quality Made in Germany.

Technical Details

Colour	Normal red
Gradient	12 pieces red/white
Length	2 m
Material	Steel tube
Lace	Steel tip standard

Scope of supply

PU=12 pieces, 12 ranging poles with colour gradient red/white
