

NESTLE travel ranging pole, wood, triangular tube tip, length 2 m 12 pieces in a set (from no. 11007000)

For construction and surveying high quality wooden ranging poles

Product number :11007200

Topfeatures

- Robust and durable PVC sheathing for daily use on the construction site or in surveying.
- Travel ranging poles with special triangular profile - for easy transport in bundles of 6

All special features at a glance

- All ranging poles are MADE IN GERMANY
- The alignment rods have a sturdy steel tip, because robustness is particularly important there.
- Use of best wood (Ø 28 mm) in production
- Triangular tip for stony subsoil, gravel soils

Description

Ranging poles are used to mark and signal terrain or boundary points during construction and surveying work. In addition, ranging poles help to align or align in the straight line between two poles with a third ranging pole. The two-colour paint makes the alignment rods easily recognisable even from a distance. The colour fields are 50 cm long. Depending on the upper colouring, a distinction is made between white and red heads. In order to make it easier to align, ranging poles are often placed in rows with alternating heads. Sturdy steel tips are used for robust work on hard ground. Only the best wood (Ø 28 mm) is used for this ranging pole. NESTLE wooden ranging poles are PVC-coated for a long service life. All Nestle alignment rods are Made in Germany.

Technical Details

Colour	Normal red
Gradient	6 pieces red/white, 6 pieces white/red
Length	2 m
Material	Wood
Lace	triangular

Scope of supply

PU: 2 sets = 12 pieces in total, from no. 11007000, 1 set = 3 pieces with colour gradient red/white, 3 pieces with colour gradient white/red
